PROFESSIONAL SUMMARY

Backend-focused full-stack software engineer with 3 years of experience building authentication, authorization, and distributed system integrations across 10+ enterprise services. Developed OIDC APIs and centralized OPA authorization solutions in Java while serving as a go-to engineer for debugging complex cross-provider authentication failures. Combines strong technical depth with system-level thinking to deliver reliable, high-impact solutions in fast-paced environments.

EDUCATION

Georgia Institute of Technology

MS in Computer Science

Atlanta, Georgia

Aug. 2025 – Present

University of Illinois at Urbana-Champaign

B.S. in Computer Science

Urbana, IL

Aug. 2019 – May 2023

EXPERIENCE

Full Stack Engineer I

June 2023 – Present

Johnson Controls - Produces fire, HVAC, and security equipment for buildings

Chicago, IL

- Spearheaded the end-to-end migration of the legacy, in-house authentication system to Auth0, securing over 2.5 million active users and reducing security-related support tickets by 45%
- Designed and implemented OAuth2 and OIDC flows across 15+ microservices, enforcing granular Role-Based Access Control (RBAC) and mitigating unauthorized API access risks by 35%.
- Implemented JWT caching strategies in Redis, cutting authentication verification latency by 30% and reducing database hits during peak traffic.
- Improved code quality through testing, code reviews, and clean coding practices, reducing defects by 20% and stabilizing production behavior.
- Collaborated with the DevOps team to establish CI/CD pipeline security gates, running automated vulnerability scans and maintaining 100% compliance with GDPR and CCPA data privacy standards.

Machine Learning Intern

May 2022 – August 2022

Sensormatic

Chicago, IL

- Led end-to-end design process, transforming prototype into a finalized solution using C++, JavaScript, HTML, and shell scripting
- Engineered real-time data interaction features, enabling users to modify and update data seamlessly with instant feedback.
- Designed and implemented a web server and interactive web interface to facilitate efficient communication with a hardware device.

PROJECTS

OPA Authorization | *High Performance, Distributed applications*

May 2025 – Present

- Led development of a scalable authorization system using Open Policy Agent (OPA) and OPAL, enabling dynamic policy evaluation across distributed services.
- Built and exposed RESTful APIs and real-time service interfaces for policy distribution and enforcement.
- Designed high-performance communication pipelines between OPAL clients and backend services, optimizing for low-latency network interactions in real-time authorization decisions.
- Architected solutions for distributed systems, ensuring consistency and fault tolerance in authorization decisions across multiple services.

Identity Broker | *Java, Identity, Distributed Systems, Kubernetes*

June 2023 – Present

- Designed and implemented secure Single Sign-On (SSO) solutions using SAML and OIDC protocols across identity providers including Keycloak, Okta, and Microsoft, improving authentication reliability and scalability.
- Developed and maintained Java-based backend services following best coding practices, enabling seamless authentication flows and token validation across distributed systems.

- Built and optimized RESTful APIs for authentication and user session management, supporting high-throughput, low-latency communication between services.
- Engineered integrations across distributed application architectures, ensuring secure data exchange between identity providers, internal services, and databases.
- Implemented multi-threaded processing for authentication workflows, improving performance and reducing login latency under concurrent user load.
- Collaborated in a fast-paced, iterative development environment, delivering features across multiple parallel initiatives with consistent on-time releases.

TECHNICAL SKILLS

Languages: Java, Python, SQL, Golang, JavaScript, HTML/CSS, R, C/C++, Shell

Frameworks: Spring Boot, Angular, React, Node.js, Flask, JUnit, Material-UI

Developer Tools: Git, Docker, Kubernetes, Terraform, Google Cloud Platform, Tekton, Grafana, VS Code, PyCharm, IntelliJ, Terraform

Libraries: JDK, Lombok, Apache Kafka, PubSub, OAuth2, pandas, NumPy
