SUMMARY

Backend engineer with 3+ years building distributed, Java-based systems in production, including an Auth0 migration that now secures 2.5M+ active users across 15+ microservices. I care about designing systems that hold up under real load and real security requirements, and I'm looking for backend roles where Java, distributed architecture, and system design are the core of the job.

SKILLS

Languages & Core

Java, Python, C/C++, Golang, SQL

Backend & Infrastructure

Spring Boot, Distributed Systems, Microservices, Kubernetes, Docker, OAuth2/OIDC, Redis, PostgreSQL, MySQL, Kafka, CI/CD

EXPERIENCE

Software Engineer, Backend Infrastructure

June 2023 – Present

Johnson Controls

Chicago, IL

- Led the migration of a legacy in-house authentication system to a distributed Auth0-based architecture, securing 2.5M+ active users and cutting security-related support tickets 45%
- Implemented OAuth2 and OIDC flows with granular RBAC across 15+ microservices, reducing unauthorized API access risk 35%, and cached JWTs in Redis to cut authentication latency 30%
- Built JUnit test coverage and automated vulnerability scanning into a Kubernetes-orchestrated CI/CD pipeline, cutting defects 20% while maintaining 100% GDPR/CCPA compliance

Machine Learning Intern

May 2022 – August 2022

Sensormatic

Chicago, IL

- Built a real-time hardware-monitoring web application in C++ and JavaScript on Linux, shipping a working prototype to the product team, increasing hardware efficiency by 20%
- Wrote a C++ web server for real-time hardware communication, replacing a multi-second delay with instant feedback for users, reducing latency time by 40%

PROJECTS

Identity Broker | *Java, Kubernetes, Distributed Systems*

June 2023 – Present

- Designed SSO across Keycloak, Okta, and Microsoft identity providers using SAML and OIDC, improving authentication reliability and scalability
- Built and deployed Java backend services on Kubernetes for secure data exchange between identity providers and internal systems
- Added multi-threaded authentication processing, reducing login latency under concurrent user load

OPA Authorization | *Distributed Systems, High Performance*

May 2025 – Present

- Built a distributed authorization system with Open Policy Agent (OPA) and OPAL for dynamic policy evaluation across services
- Designed low-latency REST APIs between OPAL clients and backend services for real-time authorization decisions
- Architected for consistency and fault tolerance across multi-service authorization decisions

EDUCATION

Georgia Institute of Technology

Atlanta, GA

M.S. in Computer Science

Aug. 2025 – Present

University of Illinois at Urbana-Champaign

Urbana, IL

B.S. in Computer Science

Aug. 2019 – May 2023

CERTIFICATIONS

Google Cloud Certified Professional Cloud Developer

Google Cloud Certified Associate Cloud Engineer
